

O2 NETWORKS

A man in a white shirt and dark trousers is standing in a server room, pointing at a server rack. The room is filled with rows of server racks, and the man is looking intently at the equipment. The background is a bright, well-lit server room with a white ceiling and a tiled floor.

O2 Networks designs and deploys secure, reliable, high performance networks connecting users to applications globally.

O2 NETWORKS

Our Approach

O2 Networks' approach is strictly best of breed. We are always able to recommend the most appropriate networking solution for your business needs.

O2 Networks maintain expertise in all cutting edge networking technologies allowing us to determine, deliver and support the leading networking technologies faster and more cost effectively than our competition.

Our Services

O2 Networks partner with your organisation every step of the way to make sure your network infrastructure meets your needs. Our services include:

Consultancy

Analysing what business goals your network needs to deliver and recommending solutions that match your budget and objectives.

Delivery

Designing and deploying optimally performing data and network security infrastructure quickly, reliably and with minimal risk.

Managed Services

Ensuring that your networking infrastructure keeps running optimally and that problems are addressed quickly and conclusively.

Our Vendors

O2 Networks work with best of breed technologies from innovative vendors and Gartner Magic Quadrant leaders, including:

F5 Networks

Blue Coat Systems

Check Point

Splunk

Cisco Systems

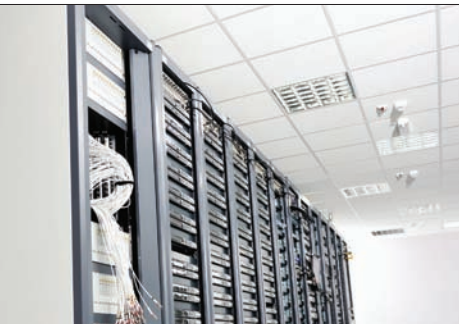

Aruba Networks

Juniper Networks

Riverbed Technology

Fortinet Inc

HP Networking

Our Experience

Our clients include some of Australia's largest service providers, enterprises and financial institutions.

O2 Networks deliver end-to-end networking solutions, aligning the most appropriate technologies to address your businesses application performance goals.

Recent major projects include:

WAN Acceleration

A leading online advertising and marketing organisation deployed a multi-million dollar CRM application.

The application's poor performance over a WAN link was having a major impact on sales performance. Using a Riverbed Steelhead WAN Acceleration solution, O2 Networks brought about a 300% improvement in application performance.

Cloud Hosting

O2 Networks designed a high performance, flexible and scalable Cloud Hosting data centre for a major telco - one of Australia's first customer-facing cloud deployments.

Since launch, there have been 15 different products successfully activated on the platform, including many of the organisation's flagship media services. The O2 Networks design is being used as a foundation template for further locations around Australia.

Organisational Restructure

A multinational manufacturing organisation was demerging two business units as part of a change in ownership.

O2 Networks was engaged for the networking and security associated with the complex decoupling of business services. O2 Networks separated these networks, including over 20 shared applications - on time, on budget and with no issues.

Application Visibility

An engineering firm with over 60 offices worldwide came to O2 Networks for help with performance problems on a multi-million dollar Oracle ERP deployment.

O2 Networks delivered an application level visibility solution to pin-point root cause and dramatically reduce resolution time. Expertise from O2 Networks helped this client achieve their goal of data centre consolidation without sacrificing end user experience.
